Christine,

Looks like Mon thru Wed next week would work for us.

Thanks,

Gary Miller

Hi Gary,
Please find attached Marlene Berg's comments. I also have concerns regarding the use a 0.5 bioavailability factor in assessing the risk. I think it would be helpful to have a discussion about it. Are you around next week?
Thanks!

Christine,
I would be happy to discuss my comments (attached).

And, some thoughts.

Do we have a sense for the difference in remediation between use of the proposed PCLs and our default soil dioxin PRGs? There are high dioxin levels at the site, but under a cap. At issue is the concentration of dioxin beyond the cap (this appears to be low, but I am not sure of the adequacy of sampling).

Second thought. Our PRGs are based on direct contact. However, what is the possibility of soil dioxin at the site winding up in the river following remediation?

Lastly, will Region 6 be sending info on proposed principal threats levels?

Marlene

Christine & Marlene,

Attached are some dioxin PRGs we are looking at for San Jacinto. Phil has prepared the attached memo on the numbers & we would appreciate your comments/discussion on these. Also, we are considering a Principle Threat Waste concentration of 13,000 ppt (one order of magnitude higher than 1,300 ppt outdoor worker value). We are currently reviewing the draft FS submitted by the PRPs & this may impact our comments.

Thanks,
